

Table 3 Interim Limits for Ammonia and Metals	
Parameter	Daily Max.
Ammonia, mg/l	21.6
Copper µg/l	17
Zinc µg/l	100

3. The permittee must submit an Annual Report of Progress which outlines the progress made towards reaching the compliance date for the ammonia, copper and zinc effluent limitations. The annual Report of Progress must be submitted by February 1 of each year. The first report is due February 1, 2004 and annually thereafter, until compliance with the ammonia and metals effluent limits is achieved. See also Part II.J., "Compliance Schedules." At a minimum, the annual report must include:
 - a. An assessment of the previous year of ammonia, copper and zinc data and comparison to the effluent limitations.
 - b. A report on progress made towards meeting the effluent limitations.
 - c. Further actions and milestones targeted for the upcoming year.

C. Whole Effluent Toxicity Testing Requirements. The permittee must conduct chronic toxicity tests on effluent samples from outfall 001. Testing must be conducted in accordance with subsections 1 through 4 below.

1. Toxicity testing must be conducted on 24-hour composite samples of effluent. In addition, a split of each sample collected must be analyzed for the chemical and physical parameters required in Part I.A above. When the timing of sample collection coincides with that of the sampling required in Part I.A, analysis of the split sample will fulfill the requirements of Part I.A.
2. Chronic Test Species and Methods
 - (1) For outfall 001, permittee must conduct four quarterly chronic tests for 1
